

DISCHARGE SUMMARY

Admission date: 2026-04-01

Discharge date: 2026-04-01 (outpatient surgical stay)

Procedure: Arthroscopic anterior cruciate ligament reconstruction, right knee, bone-patellar tendon-bone autograft.

Hospital course: Patient tolerated the procedure well and was monitored in recovery without complication. Pain adequately controlled with prescribed oral medication. Patient was ambulating safely with crutches prior to discharge.

Discharge instructions:

- Strict toe-touch weight-bearing only on the operative leg until the two-week follow-up visit.
- Brace locked in full extension at all times except during supervised exercises.
- Ice and elevate the knee for 20 minutes every 2 hours while awake for the first 72 hours.
- Follow up with orthopedic surgery in 10-14 days for wound check and suture removal.
- Home physical therapy referral to begin within the first week.
