

ORTHOPEDIC SURGERY - REFERRAL TO OUTPATIENT PHYSICAL THERAPY

Re: Post-operative rehabilitation following right ACL reconstruction

Diagnosis: Status post arthroscopic anterior cruciate ligament reconstruction (bone-patellar tendon-bone autograft), right knee, surgery date 2026-04-01.

Reason for referral: Please begin formal outpatient physical therapy per standard post-ACL-reconstruction protocol. Patient is currently non-weight-bearing per toe-touch restriction until the two-week post-op visit; restriction may be advanced at that visit if wound healing is satisfactory.

Precautions: No open-chain resisted knee extension. No pivoting or cutting activities. Brace remains locked in extension for ambulation until cleared.

Please initiate range-of-motion and quadriceps activation exercises per protocol and report any concerns regarding wound healing, effusion, or instability.
