

PHYSICAL THERAPY PROGRESS NOTE - Week 2 Post-Op

Subjective: Patient reports pain well controlled, rated 3/10 at rest.

Using crutches for all ambulation as instructed.

Objective: Incision sites clean, dry, and intact; sutures removed today.

Mild-to-moderate effusion, improved since surgery. Passive knee flexion measured at 90 degrees today.

Assessment: Healing on expected timeline. Cleared by surgeon to advance from toe-touch to weight-bearing-as-tolerated with crutches.

Plan: Discontinue strict toe-touch restriction; weight-bearing as tolerated with crutches until further notice. Brace unlocked to 0-90 degrees for ambulation. Continue quad sets and heel slides at home.
