

PHYSICAL THERAPY PROGRESS NOTE - Week 12 Post-Op

Subjective: Anterior knee pain from prior visits has fully resolved.

Patient reports feeling strong and eager to progress toward running.

Objective: Full active knee flexion achieved, symmetric to the uninvolved side. Single-leg squat performed with good control. Quadriceps strength measured at 80 percent of the uninvolved limb on hand-held dynamometry.

Assessment: Cleared to discontinue squat-depth restriction. Meeting strength criteria to begin a return-to-running program.

Plan: Clear patient to begin a structured return-to-running program starting next week. Pivoting, cutting, and contact sports remain restricted until completion of the full return-to-sport testing battery.
