

PHYSICAL THERAPY PROGRESS NOTE - Week 16 Post-Op

Subjective: Patient feels strong and is eager to return to sport activities. No knee pain, swelling, or instability reported.

Objective: Single-leg squat performed with good control and minimal compensation, meeting the strength criteria for this phase. Hop testing limb symmetry index at 92 percent, meeting the return-to-sport threshold.

Assessment: Patient has met all objective criteria on the return-to-sport testing battery.

Plan: Cleared to return to full sport participation including pivoting, cutting, and contact activities, with continued monitoring at routine follow-up.
